

Engine Reliability

Starts With Clean Fuel & System Maintenance

No matter if your boat is used for recreation or business, engine reliability is crucial to smooth, safe operation. Since most engine problems begin with bad fuel, experienced boat operators know that clean fuel is essential. That's where a comprehensive Keenan fuel management system comes in. Much more than a common fuel filter, Keenan offers the only completely integrated, full-feature fuel management system available to ensure clean, dry, fuel delivery. From 30 to 3000 hp, if your motor uses diesel fuel, Keenan offers a model specifically engineered to fit your needs.

Exclusive Self-Contained Design for Truly Modern Clean Fuel Delivery

- Dual Filters for non-stop operation
- Top loading filter elements for clean, easy replacement
- Fuel polishing cleans stored fuel before its gets sent to the motor
- Removes water before it destroys injectors
- Internal fuel passages & fill pump for self-contained priming & servicing
- Remote location EFS warning & control panel alerts operator of problems and allows them to switch filters remotely without stopping the motors
- Allows the use of lower micron pre-filter for even cleaner fuel
- System testing confirms fuel system integrity before operation or after maintenance
- Uses genuine, readily available Racor® elements
